Canadian Data Report of Fisheries and Aquatic Sciences 1200

Fisheries and Oceans Pêches et Océans

Canada

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1–25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26–160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

ABSTRACT

Paulin, G. and D.Gagnon. 2008. Coastal temperature monitoring program for 2005 and 2006: southern Gulf of St. Lawrence. Can. Data Rep. Fish. Aquat. Sci. 1200.

Bottom and surface water temperature was monitored using electronic recording devices attached to navigational buoys and set to record every two hours starting early spring until late fall. Temperature monitoring stations were located in coastal waters of the southern Gulf of St. Lawrence. The data collected are presented in tables and figures listing mean daily temperature and monthly-accumulated degree-days.

Key words: sea temperature, environmental parameter, oceanography.

RÉSUMÉ

Paulin, G. and D.Gagnon. 2008. Coastal temperature monitoring program for 2005 and 2006: southern Gulf of St. Lawrence. Can. Data Rep. Fish. Aquat. Sci. 1200.

Les températures de l'eau de fond et de surface ont fait l'objet d'un relevé avec système d'aquisisition de données, enregistrées à tous les deux heures et ceci a partir du début du printemps jusqu'a la fin de l'automne. Les enregistreurs de température ont été attachés aux bouées d'aide à la navigation. Des postes de mesure en continu de la température étaient situés dans les eaux côtières du sud du golfe du Saint-Laurent. Les données recueillies sont présentées sous forme de tableaux et figures indiquant la température moyenne journalière et l'accumulation de degrés jours mensuelles.

Mots clés : température de l'eau, paramètre environnemental, océanographie.

1.0 INTRODUCTION

In 1995, a coastal temperature monitoring program was initiated by the Lobster Research Group of the Department of Fisheries and Oceans (DFO) in Moncton, New Brunswick (N.B.). The objective of the program is to gather environmental coastal data to better understand fluctuations in water temperature and its effect on coastal marine species, especially commercially exploited species. Water temperature data were collected from coastal waters in N.B., Prince Edward Island (P.E.I.) and the Gulf shore of Nova Scotia (N.S.). Water temperature data collected before 2005 are available in Lanteigne et al. (1996), Savoie et al. (2002), Savoie and Lanteigne (2002), Savoie and Comeau (2004) and Paulin et al. (2005).

Data collected in 2005 and 2006 from the coastal temperature monitoring stations (Figure 1) across the southern Gulf of St. Lawrence (sGSL) are presented in this report.

2.0 MATERIALS AND METHODS

Programmable electronic Vemco 8-bit Minilog TR data logger™ were used for recording the water temperature during this monitoring program. Each data logger has been initialized to record a water temperature reading every two (2) hours. The minimum and maximum range of each data logger is -5 to +35 °C with a resolution of 0.2°C and accuracy of ± 0.3 °C. Specifications for the data loggers are described in Lanteigne et al. (1996).

In 2005 and 2006 most of the data loggers have been deployed by the Canadian Coast Guard (CCG) who installed the data loggers on some of their navigational buoys in the sGSL. DFO scientific staff and fishermen were also responsible for deploying and retrieving some of the data loggers (Table 1).

The data loggers launched by CCG were mounted in a steel protective housing unit, as described in Savoie et al. (2002), which is attached to the mooring system of the navigational buoys. The data loggers launched by DFO personnel or fishermen were set on independent mooring systems which consisted of an anchor, anchor line and buoy (Petrie and Dobson 1985). In both cases the data loggers were set approximately 1 meter from the bottom. Also four of the navigational buoys were fitted with data loggers measuring the surface temperature (approximately 2 meters from the surface). These sites were: Shippagan N.B., Escuminac N.B., Malpeque P.E.I. and Pleasant Bay N.S.

For the most part, the deployment of the devices is done in early spring (April – May) depending on the ice condition in the sGSL. Retrieval usually takes place late fall of the same year (November - December) by CCG or earlier by DFO personnel or fishermen. Once recovered, the data loggers were brought to DFO (Lobster Section) where the data was retrieved, formatted and added to the database.

The water depth of the CCG monitoring stations was provided by the CCG while the geographic positions (latitude and longitude) were taken from the publication, Atlantic Coast List of Lights, Buoys and Fog Signals (CCG 2004). DFO personnel or fishermen recorded the latitude and longitude together with the depth of water when deploying their respective data loggers.

Each year a number of data loggers are lost which can be attributed to equipment failure such as shackle, chain or cotter pin breaking off from the mooring system of the navigational buoys. Steel cotter pins are no longer in usage having been replaced by stainless steel to overcome breaking off due to rust.

3.0 DATA PRESENTATION

The location, geographic positions and depth of water for each temperature monitoring station are presented in Table 1. The complete data sets are presented in Appendices A for 2005 and B for 2006. Presented for each site are daily mean temperatures, standard deviations, daily minimum and maximum temperatures as well as accumulated monthly degree-days. One yearly graph is presented for each location showing the daily mean bottom and daily mean surface temperature where available.

The accumulated degree-days (*ADD*) were calculated using the following equation: (Dobson and Petrie, 1985):

$$ADD=\sum(T-T_{ref}) \times Time$$

Where T = mean daily temperature
T_{ref} = reference temperature (0°C and 4°C)
$Time$ = time period in days

The equation is true where $T < T_{ref}$ then $T - T_{ref} = 0$

4.0 ACKNOWLEDGEMENTS

The authors would like to thank David MacKinnon and his staff at the Canadian Coast Guard Base in Charlottetown for their support and ongoing help in the deployment and retrieval of the temperature recorders.
